

www.zttcable.com

Company Profile

ZTT is specialized in research, development, production, marketing, service and support of special optical fiber cables for electrical power lines, e.g. OPGW, OPPC, ADSS and stainless steel tube series for sensor and detector.

ZTT establishes the largest OPGW manufacturing base in the world. It is the one who first imported 6 world-level first-class complete stainless steel tube production lines, 4 world-level loose tube stranded aluminum tube production lines and 16 world-level special OPGW cage stranding production lines. It forms about 36,000km annual output and becomes a professional company which has the biggest OPGW output and satisfies different customers' requirements with quickest delivery time.

The OPGW, OPPC, ADSS and other special power optic cables provided by ZTT are comprehensively used in optical fiber communication industry of power grid net work and telecommunication. Furthermore, the cables, which its total amount is over 156,700km, have been sold to more than 72 countries, such as India, Poland, Thailand, Vietnam, Spain, South Africa and so on. The research and application of OPGW, OPPC and other special power optic cables are in a leading position in the world. It has made such many new technical records as large cross-section, big cores, large capacity, long span, ice resistance, sand, lightning resistance and ultra high voltage.

ZTT will consistently serve the telecommunication and power grid industry relying on its sales & services network in China and all over the world.

000

Type of Special optical fiber cables for electrical power lines

OPGW(Optical Fiber Composite Overhead Ground Wire)

OPGW cables have the dual functions of ground wire with communication capabilities.

OPPC(Optical Fiber Composite Phase Conductor)

OPPC cables have the dual functions performance functions of phase conductors with communication capabilities.

ADSS(all-dielectric self-supported cable)

ADSS cables are a kind of non-metal optical fiber cables suspended directly between two points without any supporting elements.

Fiber-Optical Aerial Cables

Typical Designs of Central Stainless Steel Tube OPGW

Central Tube OPGW Single/Double Armour layers

The central stainless steel tube is surrounded by single or double layers of aluminium clad steel wires(ACS) or mix ACS wires and aluminium alloy wires.

- Small cable diameter and short-circuit current capacity, light weight.
- The stainless steel tube can form a suitable primary fiber excess length.
- The OPGW has slightly worse tensile, torsion and crush resistance performance.
- Apply to the transformation of old lines.

Single Layer

Typical Designs of Stranded Stainless Steel Tube OPGW

OPGW With Stranded Layers, Single Tube And Multitube Are Available Double /Three Armour Layers

The stainless steel tube is stranded by double or three layers of aluminium clad steel wires(ACS) or mix ACS wires and aluminium alloy wires.

- larger cable diameter and much more fiber count.
- larger tensile strength and fault current capacity to reach a better balance of electrical and mechanical performance.
- The amount of Stainless Steel Tube could be 1, 2 or 3 (max. at present).
- Optimum stranding design to reach a suitable secondary fiber excess length.
- The stranded layers could be double layers or three layers, the stranded wires could be AS wires with/or AA and AI wires.

Double Layers

Typical Designs of Central Al-covered Stainless Steel Tube OPGW

Central Al-covered stainless steel tube OPGW Single/Double Armour Layers

The central Al-covered steel tube is surrounded by single or double layers of aluminium clad steel wires(ACS) or mix ACS wires and aluminium alloy wires.

- Al-covered Stainless Steel tube design increases the cross section of AL, to reach a better fault current and lightning resistance performance.
- Good anti-corrosion performance.
- Apply to the transmission line which requires small diameter and large fault current.

Single Layer

Typical Designs of Aluminum Tube OPGW

Aluminium tube OPGW Single/Double Armour Layers

The Aluminium tube is surrounded by single or double layers of aluminium clad steel wires(ACS) or mix ACS wires and aluminium alloy wires.

- Good anti-corrosion performance.
- Material and structure are uniform, good resistance to vibration fatigue.
- Short circuit current has small effect on the optical fiber transmission properties.
- Good anti-lightning performance.

Typical Designs of Lightning Resistant Central Stainless Steel Tube OPGW with Compressed Wires

The central stainless steel tube is surrounded by double layers of aluminium clad steel wires(ACS), the inner layer aluminium clad steel wires are compressed, the outer layer aluminium clad steel wires are all compressed or all round.

- Compressing round AS wires into sector AS wires during stranding.
- Compared with round AS wires stranding, sector AS wires stranding can increase the cross section and fault current capacity while the cable diameter is the same.
- Compared with round AS wires stranding, sector AS wires stranding can dramatically increase the diameter of outer wires to enhance the lightning performance.
- Apply to the transmission line which requires small diameter and large fault current.
- Apply to heavy thunderstorm areas.

Typical Designs of OPPC

The Aluminium tube is surrounded by single or double layers of aluminium clad steel wires(ACS) or mix ACS wires and aluminium alloy wires.

- Replacing one or several wires of the traditional conductor with stainless steel tube and strand the tube with AS/steel wires and AL/AA wires.
- Replacing one of the three phase conductors with OPPC, thus to form a transmission line which consists of one OPPC and two phase conductors.
- Mechanical and electrical performance can match the adjacent two phase conductors.
- OPPC can meet durative high temperature resistant which verified by Temperature Cycling test and Short Current test.
- OPPC is applied to middle & high voltage power lines without ground wires such as 10kV, 35kV, 66kV and so on.
- Telecommunications for middle & high voltage power lines in urban and rural areas; Providing optical cables for building distribution automation station.

All-dielectric Self-supporting Aerial Installation Cable — ADSS

- ADSS are mainly installed at existing 220kV or lower voltage power lines.
- Layer or central tube design.
- Aramid yarn is used as the strength member to assure the tensile and strain performance, and Du Pont is our only partner.
- Outer sheath can be classified into PE and Tracking resistance PE to correspond the space potential below and more than 12kV.
- ADSS(stranded layer type)maximum fiber count: 312.
- ADSS(stranded layer type)maximum span can be up to 1500m.

ISO Certificates

ZTT has established a complete, advanced quality inspection center of controlling raw materials and product quality. To ensure high quality of OPGW, ZTT always selects raw materials from international and domestic famous brands. ZTT also has received certifications of ISO9001 and ISO14001.

Test Facilities

Optical Fiber Analysis System

Optical Time Domain Reflectometer

Chromatic Dispersion of Optical fiber tester

Tensile Strength Test Equipment

DC bridge

Tension test instrument for wires

Impact test instrument

Crush test instrument

Temperature cycling test chamber

ZTT has passed the test by authoritative institutions at home and abroad. The authoritative institutions include Quality Supervision & Inspection Center of Optical Communication Products, Ministry of Information Industry of P.R.C, Shanghai Electric Cable Research Institute, State Grid Electric Power Research Institute, U.S. PLP Company Laboratory, Canada KINECTRICS Company, JEN—Polish National Power Laboratory and KEMA.

Testing

All types of our OPGW/OPPC cable have passed respective type tests from internationally acknowledged independent test laboratory according to IEC 60794 and IEEE 1138. If you want any information of the type test report, please contact us.

Routine Testing

Optical fiber attenuation coefficient (OTDR) Inspection of wires before stranding Quality of surface Direction of outer layer Diameter of cable Weight of cable Packing inspection

Factory Acceptance Testing

Design

Optical fiber attenuation coefficient (OTDR) Mode Field Diameter of optical fiber Cladding Diameter of optical fiber Cladding non-circularity of optical fiber Visual inspection of the cable elements Lay length of outer layer Diameter of cable Weight of cable Breaking strength of cable

Installation and After-sale Service

ZTT have a rich experience on installation of OPGW and OPPC cable, and we can provide the service for our customers.

Outstanding Projects

Three Ultra Project

China 400kV Qinghai Golmud to Tibet Lhasa ±400kV DC networking project Ultra-long distance:1400km Ultra-low temperature:-60°C Ultral-low loss:≤0.18dB/km

High voltage

China±660kVNingdong to Shanghai ±600kV DC Transmission Line ProjectChina±800kVHami South to Zhengzhou ±800kV DC UHV Transmission Line Project

China1000 kVSoutheast Shanxi province Nanyang to Jingmen AC UHV test example projectChina±800 kVXiangjiaba to Shanghai DC UHV power transmission example project

Large cores

China500 kVZhejiang 500kV power transmission line Zhuji—Pingyao partOPGW: 56cores G.652, 16cores Z-55Spain220kVENDESA GE NNJ001-OPGW ProjectOPGW:96cores G652China220 kVGuojiagang transformer substation optical fiber communication projectIarge span across Yangtze RiverOPGW: 68cores G.652, 4cores Z-55

Large span

China

220 kV

Zhoushan connect network with continent power transmission line project Luotou channel large span, span length: 2756m

China ±800 kV

Xiangjiaba to Shanghai DC UHV power transmission example project Xinjiyang—Yangtze River large span, span length: 2052m

Large temperature variation

China

220 kV

Xinjiang Tuokexun—Ku'erle power transmission line OPGW: -50°C~ +40°CChina±400 kVDC net-connected project from Ge'ermu Qinghai to Lhasa Tibet(-60°C ~ +65°C, the highest elevation is 5300m, very low loss, very long distance but no relay project), totally620km, (contains 32 cores、 24cores)Kazakhstan110kV110KV Aktyubinskaya SS- KPP 110KV ASF Transmission line (-60°C) 24cores, 2.96kmMongolia110 kVMongolia Transmission Line -40°C ~ +35°C

Lightning resistance

China 220 kV Hainan 220kV Guantang—Yazaitang power transmission line OPGW: Annual average thunderstorm day 120days

ZTT CABLE

ZTT is a leading and global manufacturer of cable systems, which provides package solutions for telecommunication and power applications around the world. With its rich heritage of highly advanced R&D results, ZTT owns the cutting-edge technology within the industry.

ZTT was established in 1992 and became a listed company in 2002. Up to now, ZTT has developed to be a Group Company with 26 subsidiaries in China. Our products are widely used in telecommunication industry, power transmission industry, mining cable industry, marine and submarine cable industry, railway industry, cable manufacturing and so on.

ZTT has always committed to be market-oriented, meeting various demands of our customers and providing economical & reliable solutions. With innovative product design, ZTT can also guarantee the high-end engineering capabilities and life cycle maintenance services.
